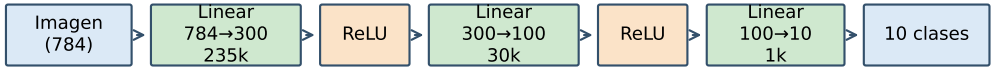
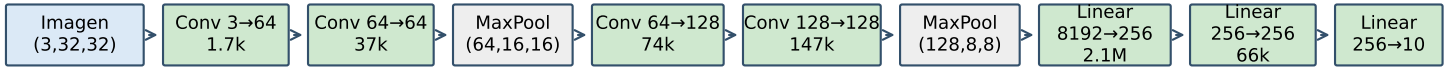
Verde: se poda · Naranja: activación · Gris: sin poda · Morado: atención

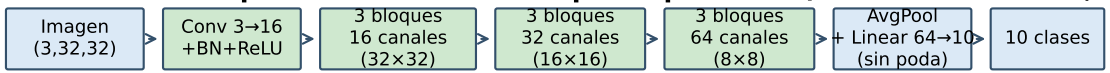
## MLP (LeNet-300-100) · MNIST · 266k pesos podables



## CNN (Conv-4) · CIFAR-10 · ~2.4M pesos podables (86% en la primera Linear)

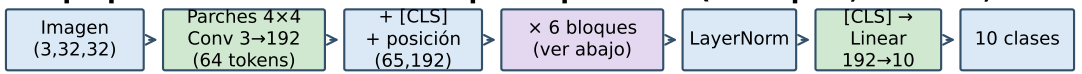


## ResNet de 20 capas · CIFAR-10 · ~270k pesos podables (solo convoluciones; la capa final no se poda)

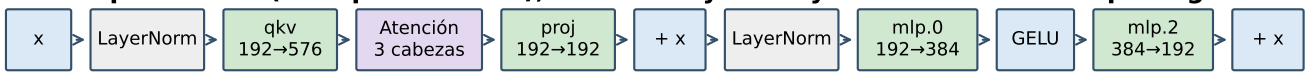


Bloque residual: x → Conv3×3 → BN → ReLU → Conv3×3 → BN → (+ x) → ReLU
(con cambio de canales, atajo Conv 1×1)

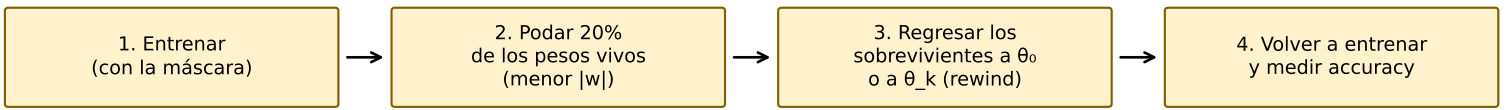
## ViT pequeño · CIFAR-10 · ~1.8M pesos podables (6 bloques, dim 192, 3 cabezas)



## Un bloque del ViT (se repite 6 veces); las Linear y las LayerNorm entran a la poda global



## Poda por magnitud iterativa (IMP)



**se repite 8-15 rondas**
